UNIVERSITY OF ALBERTA

AUGUSTANA CAMPUS

Augustana Computing Science 320

Final Evaluation

Instructions:
Fill out the following questions, <u>explaining your answer</u>, and submit your work on eClass as a pdf. Your submission will be held confidential. Make sure your name it at the top of the page.

1) What is the single most important contribution that you made to your team's final product since the design phase?

   I made sure assets like pictures and movies were ready for my groups use.

2) What are the THREE main contributions you made to the team project since the beginning, not including the contribution listed in 1) above?

   I taught Barret how to use video editing tools.
   I learned from Oscar how to add information to our universal screens so that I can (and did) add videos to the universal screen.
   I helped Oscar put together each of the 5 muscle group java classes and put together the information for the 15 machines to go on the universal screens.

3) What was your biggest improvement as a result of completing this project?

   I learned that even if I don't know how to program a section, I can still pair program to help someone who does know.

4) What is the main thing you learned about Software Engineering in this course?

   I learned how much work can go into a project without programming.

5) Evaluate yourself, by placing an X in the appropriate spots on the table.

Attribute	Never	Sometimes	Often	Almost Always	Always
Did you actively support, engage, and listen to your class- and team- mates?					X
Did you arrive at class and team meetings fully prepared and on time?				X	
Did you refrain from using electronic devices for anything except work during class time and team meetings?					X

Did you play an active role in discussions?					X
Did your comments advance consistently the level and depth of the discussions?					X
Was the group dynamic of your team consistently better because of you?					X
If there was a problem with the project, did you address it with the rest of the team?				X	

6) Evaluate your team.
   a. Using a total of 100%, distribute this among your team members to indicate how much work & effort you think each person has put into the project. Remember to consider tangible results, contributions to the discussions, and leadership.

Team Member (include yourself)	% Contribution
Oscar	40
Barret	20
Nathan	40
Total:	100%

   b. State the single most important contribution that each member of your team has made (not including yourself).

   Oscar put together, and broke ground around, the UI and backend.
   Barret helped me film the videos at the fitness center and helped edit them together.

   c. What was the structure of your team? (E.g. Was there a leader? Did you assign roles?)

   Oscar became our leader in the second half.
   We had no roles still, we simply work where our skills are applicable and if we need help then we train other group members in our task.
